LEAGUE OF ROCK INC.

A PARTNER BRIEFING

THE SOCIAL MEDIA EMPIRE.

The engine that turns League of Rock from a show into a self-sustaining IP.

This document is a slide-by-slide content blueprint for the partner presentation on League of Rock Inc.'s social media strategy. The network distribution for the show is in place. This presentation focuses exclusively on the social media ecosystem we will build, why it is critical to the long-term value of the company, and how it feeds directly into the success of the show and the broader IP.

HOW TO READ THIS DOCUMENT

Each slide section below contains: a slide number, an eyebrow / category, the slide's headline, the body content, supporting bullets and data points, and visual notes for guidance when building the deck. The deck is sized at 14 slides — flexible to expand or compress as needed.

A PARTNER BRIEFING

The Social Media Empire.

The engine that turns League of Rock from a show into a self-sustaining IP.

How we build, scale, and monetize the social ecosystem that surrounds League of Rock | The Show — and why this is not a marketing expense, but a parallel business unit for League of Rock Inc.

> **VISUAL NOTE:** *Cover slide. Bold title treatment. Dark cinematic background. The subtitle should hit emotionally — this is the thesis in one line.*

THE OPPORTUNITY

The show is the moment. Social is the asset.

Network distribution puts the show in front of audiences on premiere weekends. The social media ecosystem is what keeps those audiences engaged between episodes, between seasons, and between regional expansions — and what turns them into a measurable, monetizable, transferable business asset for the company.

THREE FOUNDATION POINTS

- **The show creates the audience. Social keeps them.** Without an ecosystem to catch them, they scatter the moment a season ends.
- **Social produces data. Data unlocks future leverage.** Audience analytics give us bargaining power in every future negotiation.
- **Social opens revenue lines the broadcast deal doesn't reach.** Ad revenue, brand integrations, products, live events, music rights, memberships, licensing.

THE STRATEGIC THESIS

We're not building a marketing channel. We're building a media company.

Most TV shows treat social as a promotional arm. We treat it as a parallel business — one that runs year-round, captures audience data the broadcast deal doesn't, and creates monetization streams the show alone can't reach. This is how League of Rock Inc. graduates from 'IP licensor' to 'IP operator.'

THREE STRUCTURAL PILLARS

- **01 One ecosystem, owned end-to-end.** Algorithm-proof email, community, and membership layers — the assets the platforms can't take from us.
- **02 Diversified income that compounds.** Ad revenue, brand integrations, products, live events, music rights, memberships, licensing — each stream strengthens the others.
- **03 Built-in audience asset.** Every viewer becomes a follower; every follower becomes a customer; every customer becomes an evangelist who recruits the next stranger.

> **VISUAL NOTE:** *Visual: 'We're not just / building a marketing channel.' on muted gray. 'We're building a media company.' in bold red beneath. The three pillars below as numbered cards.*

THE MARKET

The playbook is proven. The category is hot.

Every component of the strategy below has been proven at scale by category-defining companies. The social-led media business model is no longer experimental. We are stepping into the largest open opportunity in entertainment.

$899M

MrBeast / Beast Industries projected 2025 revenue.

The diversification playbook works — content is the audience-acquisition channel; profit lives in products, brand deals, and licensing.

59.6M

Views in 5 days for Netflix's Stranger Things finale.

Social Media Gathered 59.6M Views for the Stranger Things finale. These platforms helped funnel 59.6M new audience members to the show.

+138%

YoY growth in newsletter paid subscription revenue, 2025.

Owned audience monetizes. Email is no longer 'nice to have' — it's the spine of every successful creator-led business.

36M

Views on a single Tiny Desk performance in 2024.

Music performances are the most universally shareable content format in existence. Format-led music content travels further than any other category.

> **VISUAL NOTE:** *Visual: 4 large stat cards in a row. Big number in red/amber, label below in white, source/explanation in muted gray italic. This is a 'wow' moment — the numbers need to dominate the slide.*

CORE OBJECTIVES

What this ecosystem builds: the audience.

The first four objectives are about audience and direct revenue — the engines that turn viewers into customers and customers into evangelists.

01 · BUILD A FANBASE WITH DEEP CONNECTION

Audiences fall in love with characters — coaches, contestants, the bands — not just the show. The League of Rock alumni base is our launch audience. The parasocial bond drives every other outcome in this strategy. When fans feel a genuine connection to specific people on the show, they follow them, vote for them, defend them, buy their merch, attend their tours, and bring their friends.

02 · DRIVE TRAFFIC TO THE SHOW

Engineered social-to-streaming funnels deliver viewers directly to the show on premiere weekends and throughout each season's run. Every clip ends pointing at the next destination. Every short-form view is engineered to convert to a long-form view, which is engineered to convert to tune-in behavior.

03 · DRIVE TRAFFIC TO PRODUCTS

Merchandise, music releases, live event tickets, signature products. Fans convert into customers when the relationship is real and the community is active. Without a social ecosystem, every product launch starts from cold awareness. With one, every launch is a warm offer to people who already love the brand.

04 · DRIVE TRAFFIC TO BRAND DEALS

Premium engaged audiences command premium CPMs. Sponsored challenges are already structural to the show format — social extends those relationships year-round, multiplying the value of each sponsor commitment. A 1M-subscriber music channel routinely commands $25K–$50K per integrated brand deal.

What this ecosystem builds: the strategic asset.

The next four objectives are about strategic value — what the social ecosystem unlocks for League of Rock Inc. as a company, beyond direct revenue.

05 · PROVEN ANALYTICS = LEVERAGE IN EVERY FUTURE DEAL

Hard data on audience size, demographics, engagement, regional performance, and conversion behavior gives us bargaining power with future distribution partners. We walk into Season 2, Season 3, and regional spin-off negotiations with receipts — not pitch decks. Data turns 'we think this will work' into 'this already works.'

06 · NEW MARKET INTELLIGENCE

Regional engagement data tells us where the show is already pulling — so we expand into NY, LA, the UK, and beyond into proven territories, not blind guesses. Each region's social engagement is a leading indicator of how that market will respond to a localized version of the show. We reduce launch risk on every regional spin-off.

07 · TALENT RECRUITMENT ENGINE

The social audience becomes the casting pool for future seasons — basement musicians, coaches, guest artists, sponsors. Casting costs drop dramatically when you have an engaged community of self-identified target participants. Alumni from past seasons become Season 5 All-Stars. Future coaches discover us through their own audiences.

08 · REAL-TIME AUDIENCE FEEDBACK

Comments, polls, watch behavior, Discord conversations — direct signal on what fans actually want. The show evolves based on data, not gut feel. This is the closed-loop between content and audience that traditional television has never had. We learn what works in week one and apply it by week six.

THE FRAMEWORK

The social ecosystem at a glance.

The framework operates as three connected layers. Each layer has a distinct purpose, distinct platforms, and distinct content strategy. Together they form a complete funnel from total strangers to paying super-fans — and each layer feeds the next.

LAYER 01 · DISCOVERY — TOP OF FUNNEL · REACH

Platforms: TikTok, Instagram Reels, YouTube Shorts.

Purpose: Short-form vertical video. Engineered for the algorithm. Built for people who have never heard of LOR. This is where we capture the next million viewers — one 15-second clip at a time. Disposable in feel, durable in compound effect.

LAYER 02 · DEPTH — MIDDLE OF FUNNEL · RELATIONSHIP

Platforms: YouTube long-form, Podcast, Livestreams (YouTube Live / Twitch).

Purpose: Long-form storytelling, performances, BTS, interviews. Where parasocial bonds form. Someone who saw a 30-second clip becomes someone who watched a 20-minute mini-doc — and then someone who subscribes to follow every drop.

LAYER 03 · OWNED — BOTTOM OF FUNNEL · CONVERSION

Platforms: Newsletter, Ccommunity, Membership program.

Purpose: Audiences we own. Algorithm-proof. The asset that monetizes and de-risks the whole business. If TikTok dies tomorrow, the email list and Discord remain. This is the layer that turns attention into a long-term company asset.

All three layers feed the monetization engine — and the monetization engine feeds back into the show through audience data, sponsor relationships, and talent discovery. The loop closes.

INSIDE THE FRAMEWORK

Six content pillars. Endless permutations.

Every piece of content we produce falls into one of six pillars. The pillars are the repeatable formats; the permutations are the specific clips, episodes, interviews, and posts that fill them. By committing to a defined set of pillars, the production team can move fast — and the audience knows what to expect from us.

01 · BEHIND THE SCENES

Cinematic behind-the-scenes content shot with feature-film production value. The band rehearsal room. The coach's pep talk before a show. The argument over song choice. The moment a basement musician realizes they can actually do this. Most reality shows have phone-quality BTS. Ours will look like A24.

02 · OUTTAKES FROM THE SHOW

The shareable, viral-by-design moments that didn't quite fit the broadcast cut. Quick hits. Surprise reactions. The line nobody expected. Outtakes have a different psychology than the show itself — they feel like an inside joke shared between the audience and the production, which deepens the bond.

03 · INTERVIEWS

Long-form sit-down interviews with coaches, contestants, and guest artists. Masterclass-style breakdowns. Stories from 40 years of rock history. The 'how I really got here' conversations. These build parasocial depth and become evergreen content — searchable, sharable, returnable to long after a season ends.

04 · BACKSTORIES FROM THE CONTESTANTS

The emotional engine of the entire ecosystem. Mini-documentaries on each band member: the Reluctant Rocker, the Shy Singer, the Basement Musician. The 'why I never did this' becomes the show's emotional core online — often more important than the performances themselves in driving fan investment.

05 · FULL PERFORMANCES FROM THE MUSICIANS ON THE SHOW

Every band's full live set. Every coach's session. The unreleased rehearsal-room take. The acoustic version of the season's anthem. Music performances are the most universally shareable content format that exists — language-agnostic, emotion-driven, infinitely re-postable. This is the Tiny Desk / COLORS playbook, applied to League of Rock.

06 · FUNNY MOMENTS

The clippable, repeatable, share-worthy comedic beats. What gets screenshot. What becomes the meme. Humor is the highest-velocity content category on every platform — and band dynamics produce comedy gold organically. We don't have to manufacture it. We just have to catch it.

THE FUNNEL

How strangers become super-fans.

Every short-form view feeds long-form. Every long-form view feeds email. Every subscriber feeds community. Every community member feeds revenue. Each stage compounds — and our existing alumni base seeds the bottom of the funnel from day one.

THE SIX STAGES

- **01 STRANGER** Sees a clip. The first 1.5 seconds decide everything.
- **02 FOLLOWER** Hits follow. We have a chance to reach them again — algorithm permitting.
- **03 VIEWER** Watches long-form. Now they know the people, the show, the world.
- **04 SUBSCRIBER** Joins email list. We own this relationship outright. No algorithm in between.

- **05 MEMBER** Joins community (Discord). Now they're talking to other fans — the bond deepens.
- **06 SUPER-FAN** Pays for membership. Buys merch. Attends live events. Brings the next stranger in.

INDUSTRY BENCHMARKS

Free-to-paid conversion in engaged communities: 4–8%. Email open rates for engaged audiences: 30–43% (Beehiiv State of Newsletters, 2026). These are the metrics that prove the funnel is working — and they're directly comparable to category-defining creator businesses.

> **VISUAL NOTE:** *Visual: 6 horizontal cards in a row, like a sideways funnel. Each card grows slightly more saturated as you move right (gray → amber → red). Arrows between cards pointing right. The footer carries the industry benchmark stats.*

MARKET INTELLIGENCE

Social analytics tell us which city wants us next.

Traditional market testing for a TV format is slow, expensive, and often wrong. Focus groups cost $50K–$200K per market and produce data that's already stale by the time the show airs. Social analytics give us something better — real-time, real-audience signal on which cities, countries, and demographics are already pulling toward League of Rock before we commit a single dollar to producing there.

WHAT THE PLATFORMS ACTUALLY TELL US

Every major platform we operate on — YouTube, TikTok, Instagram, Facebook — provides geographic, demographic, and behavioral analytics down to the city level. We see where our content is over-indexing, where the engagement is deepest, where viewers are sharing the most. That data becomes a heat map of the regions most ready for a localized version of the show.

- **YouTube Studio** Geographic watch-time data, retention curves by region, subscriber demographics, traffic source analytics.
- **TikTok Analytics** Top territories by follower growth and engagement; trending content patterns by region; demographic breakdowns.
- **Instagram Insights** Audience location at city level, age and gender splits, active times, content performance by format.
- **Facebook / Meta Business Suite** Cross-platform reach data, lookalike audience modeling, ad performance signals by market.

WHAT THIS SAVES US

Traditional market research for a TV launch in a new region typically runs $150K–$500K per market and takes 3–6 months. Social analytics produce comparable confidence — often better, because it's real audience behavior, not survey responses — for the cost of a content team that's already producing for the existing show. The intelligence comes free with the work we're already doing.

HOW IT CHANGES OUR REGIONAL EXPANSION LOGIC

When the time comes to launch in a new city, we don't guess — we read the data we've been accumulating since day one. Cities with high organic engagement get green-lit first. Cities with weaker signal get a content push to build the audience before a production decision. Every regional spin-off is supported by months of audience data, sponsor interest data, and behavioral confirmation that the market is ready. Risk on each expansion drops dramatically.

> **VISUAL NOTE:** *Visual: A heat-map style visualization at center — a stylized world or North America map with cities lit up at different intensities (Toronto bright, NY/LA/UK glowing, others fading). Around the map, callout boxes pulled from each platform's analytics dashboard. The slide should feel like 'we're already watching, we're already learning.' The cost comparison ($150K traditional vs. ~$0 for analytics we already collect) is a key data point — consider a small comparison block.*

TALENT RECRUITMENT

Stop chasing talent. Build a magnet.

Traditional casting for a reality show is expensive, slow, and reactive — casting directors, talent scouts, agency relationships, cattle-call auditions, and weeks of vetting. With a strong social ecosystem, the model flips entirely: talent comes to us. Contestants who want to be on the show, coaches who want to collaborate, crew who want to work on it — all surfacing themselves through engagement with our content.

THE THREE TALENT POOLS WE RECRUIT FROM SOCIALS

01 · Contestants — the basement musicians who'll audition.

League of Rock's core casting need is 'people who have always wanted to play in a band but never have.' That's a community that self-identifies in social comments, in Discord conversations, in shared posts. Every clip we put out attracts that exact psychographic. By Season 2, our casting funnel is the audience itself — the people who watched Season 1 and thought 'that could be me.' Casting calls become invite-driven, not search-driven.

02 · Coaches — the pro musicians who'll mentor.

Working musicians are deeply networked and watch what other working musicians are doing. When League of Rock develops the kind of visual signature and cultural credibility our content strategy is designed to create, coaches start raising their hands. A coach slot becomes a desired industry credential — similar to how a Tiny Desk or COLORS slot is now pursued by major artists. We move from 'who can we get?' to 'who do we choose?'

03 · Crew — the editors, camera ops, producers who'll build it.

Production hiring on a music-driven show often relies on personal networks and recruitment agencies. With a strong social presence, talented crew people find us first — they reach out because they want to work on the production whose content they admire. This dramatically reduces recruiting costs, shortens hiring cycles, and improves cultural fit because the people coming in already understand what we do.

WHAT THIS SAVES US

Traditional casting and recruiting costs for an unscripted music series typically run $200K–$500K per season in casting director fees, audition production, scouting travel, and agency commissions. A social-led recruitment funnel doesn't eliminate those line items — but it reduces them substantially. Inbound applicants from social cost effectively nothing to surface. The cost shifts from 'finding people' to 'choosing among them.'

More importantly, the quality of fit goes up. People who find us through our content have already self-selected on values, tone, and aesthetic. They want to be part of *this* show specifically — not just any music show that's casting. That alignment translates into better on-screen chemistry, fewer dropouts during production, and stronger arcs for the audience.

> **VISUAL NOTE:** *Visual: A 3-column layout showing the three talent pools — Contestants, Coaches, Crew. Each column with an icon, a header, a short tagline, and the body content. Below: a small cost-comparison callout — 'Traditional casting/recruiting per season: $200K–$500K. Social-led recruitment: a fraction of that, with higher-quality fit.' The arrow direction matters here: design should suggest talent flowing INTO the brand, not the brand chasing it.*

MERCH & PRODUCTS

Disney sells $63 billion in merch a year. Here's why that matters.

Disney is the world's most valuable IP company — not because of theme parks, not because of streaming, not because of movies. Because of merchandise. Their consumer products division generated $63 billion in licensed product sales in 2024, representing roughly 20% of the entire global licensed product market. The lesson for League of Rock Inc.: if you build IP people love, the merchandise economy attached to it can dwarf the original content business. And social media is the engine that makes that economy run.

$63B

Disney's annual licensed product sales (2024).

~20% of the entire $307.9B global licensed product market. The largest licensor on Earth — by a wide margin.

$2.6B

Annual revenue from Stitch-themed products alone.

Up from $200M just five years prior — a 13x increase. One character. One franchise. Built on fan love.

$500M

Taylor Swift's Eras Tour merch sales — North American leg alone.

Music + a passionate audience = an unprecedented merch economy. The Swift template is the closest analogue to LOR's opportunity.

10x

Revenue multiplier for YouTubers who sell merch vs. ads alone.

Source: Sellfy analysis of 2,500+ creator stores. Merch isn't a bonus revenue line — it's the largest one for many creator-led businesses.

WHY SOCIAL IS THE MERCH ENGINE

Disney runs its merchandise empire through retail partners, theme parks, and licensed manufacturers. Creator-led businesses run their merchandise empires through social — and that's the model that fits League of Rock. Every piece of content becomes a soft promotional moment: a coach wearing the new tour shirt, a contestant unboxing the drop, a behind-the-scenes shot in branded apparel. The product is woven into the content; the content drives the sales. Without social, merch is a passive catalog. With social, it's a live, demand-generating engine.

LOR'S MERCH OPPORTUNITY

- **Show-branded apparel** Limited-edition tees, hoodies, hats — seasonal drops tied to specific episodes or moments.

- **Band-themed lines** Each band that forms in a season gets its own merch line. Fans pick favorites; their merch sells out first.
- **Coach signature collabs** Co-branded items with each coach. Their followers buy in. We share revenue. Everyone wins.
- **Vinyl and recorded music** Season anthems, EPs from breakout bands, live recordings from the finale. Physical and digital.
- **Premium and lifestyle** Higher-end items — jackets, instruments accessories, signed pieces — tied to specific cultural moments.
- **Sponsor-tied product** Co-branded products with our sponsored-challenge partners. Each challenge becomes a small product launch.

THE TAKEAWAY

Disney's $63 billion proves that merchandise can be the largest line of business for an IP company — bigger than the original content that created the IP. Taylor Swift's $500 million in tour merch proves that music-IP merchandise is a category of its own. And every YouTuber with a serious merch program proves that the social-led model works at our scale, not just at theirs. League of Rock Inc.'s merch potential is unlocked by — and only by — the social media engine. Without it, merch is a side hustle. With it, it's the second-largest revenue line in the company.

> **VISUAL NOTE:** *Visual: Title dominates. Below, four large stat cards in a row (Disney $63B, Stitch $2.6B, Swift $500M, YouTuber 10x). Below those, the 'Why social is the merch engine' section in body, then the 6 merch line types as bullets or as a 3x2 grid. The takeaway sits at the bottom in a highlighted box. The slide is data-heavy by design — Disney is the proof case and the numbers do the persuasion.*

THE MULTIPLIERS

Two engines most shows don't have. We have both.

Built into the structure of League of Rock are two value-multiplying engines that compound the social ecosystem's economics far beyond what a typical TV-companion social presence achieves.

ENGINE 01 · THE SUB-IP MULTIPLIER

Every person on screen is a sub-channel.

Stat to remember: +4,700% — the increase in daily US streams for a single artist within one week of a Tiny Desk slot. Today, that value goes entirely uncaptured by the platform that created the moment. League of Rock is designed to capture it.

- **CONTESTANTS** → owned artists. Right of first refusal on releases. Seed of a future LOR Records.
- **COACHES** → distribution. Each coach gets a #TeamX content track. Their audiences become ours.
- **FORMATS** → multiple IPs. LOR Sessions, Unplugged, Anywhere, Live — each compounds the brand and survives any one platform's choices.

ENGINE 02 · STRUCTURAL SPONSORSHIP

Monetization isn't bolted on. It's the format.

Each Youtube video of the show is built around a Sponsor— The social ecosystem extends those sponsor relationships year-round, beyond the airing window, multiplying the value of every brand partnership.

Built-in sponsor categories include: Music Lifestyle Brands · Instrument Retailers · Instrument Makers · Energy Drinks · Clothing & Lifestyle · Audio & Tech Brands.

VISUAL NOTE: *Visual: Two large side-by-side panels. LEFT: 'ENGINE 01 — THE SUB-IP MULTIPLIER' with the +4,700% stat dominating, then the three sub-points below. RIGHT: 'ENGINE 02 — STRUCTURAL SPONSORSHIP' with the sponsored-challenges explanation and a built-in sponsor category list. The visual contrast between the two engines is the point.*

MONETIZATION

Twelve revenue streams. One audience.

Diversified income that protects against platform volatility and compounds as the audience grows. The social ecosystem unlocks revenue lines the broadcast deal alone doesn't reach. Each tier represents a different phase of build — and each is supported by the strategy above.

TIER 01 · BUILD FIRST

- **Sponsorships** Structural to the show; extended year-round via social.
- **YouTube AdSense** $3–$10 RPM on long-form music/entertainment content.
- **Merch & Drops** Limited drops and team-themed apparel; drops out-perform evergreen catalog.

TIER 02 ·

- **Live Events** Annual LOR Live event; later, a multi-city tour.
- **Music Rights & Sync** Publishing + recordings + sync licensing for performances generated by the show.
- **Newsletter Sponsorships** $25–$100 CPM once the list passes ~25K engaged subscribers.
- **Membership Program** $5.99/mo benchmark (Critical Role's Beacon model). Ad-free, exclusives, presales.

TIER 03 ·

- **Format Licensing** Regional and international format sales as the franchise expands.
- **Education Products** Coach Masterclasses; how-to-form-a-band courses; high-margin digital products.
- **Equity Brand Deals** Stake in the brands we partner with, rather than cash integration fees alone.

> **VISUAL NOTE:** *Visual: Three vertical tier columns side by side, colored red (Tier 1), amber (Tier 2), and white (Tier 3). Each tier card lists its revenue lines with brief notes. The progression — from immediately monetizable to long-term — should be clear visually.*

THE CLOSE

This isn't marketing. It's the second business.

League of Rock Inc. has the show. With it, we have a moment. Without the social media ecosystem, that moment ends when each season does. With it, the moment becomes a movement — and the movement becomes a company asset.

THREE CLOSING PRINCIPLES

- **01 The show creates the moment. Social compounds it.** Every episode drives top-of-funnel attention. The social ecosystem catches that attention and converts it into a long-term asset the company owns.
- **02 Diversified revenue de-risks the company.** The broadcast deal is one revenue line. The social ecosystem is twelve. Each line strengthens the others. If any single platform shifts policy, the business survives.
- **03 The data we collect is the IP we keep.** Audience data, engagement signals, demographic insights — these are the most valuable assets we'll generate, and they're how we win every future negotiation.

LET'S BUILD THE ENGINE.

> **VISUAL NOTE:** *Visual: Big bold close. Headline 'This isn't marketing. It's the second business.' as the centerpiece. Three principles as numbered cards below. Final line 'LET'S BUILD THE ENGINE.' in big red spaced caps.*
